SaladoConfigurator Description:

----- SaladoConfigurator is a simple Java application that allows you to build user settings for the SaladoPlayer. Its power comes from the ability to have a flexible and extensible XML configuration file. This allows you to create complex set of options and support them with your applications 1) XML configuration file 2) Flexible and extensible XML file 3) Customizable on-screen user interface 4) Abundant GUI options and API functions 5) Keyboard shortcuts 6) Printable forms 7) Access to remote users 8) Customized graphic interface 9) Easy to use The application is a follow-up of the previous program SaladoPlayerDumpPro (see my review here). I re-coded the code in order to create a simple Java based application. In this version I added the following new features: a) Option to create "custom" XML files. Just create a new XML file containing the settings that you want to apply for SaladoPlayer and publish it on your website. The application will process the XML file and will automatically apply them to the SaladoPlayer player. b) Option to save the settings. Simply save them to a XML file, print them on paper or do whatever you want with them! c) More options and functions available on the on-screen user interface. d) Smaller file size.
