After all, Photoshop is a tool that works with raster images (dot matrix) and you have a _digital camera_ or scanner to convert your photographs to this format. If you simply need to adjust a few things, such as tone and exposure or brightness and contrast, then you can use a photo editor, not Photoshop. But if you're looking for the advanced capabilities of Photoshop — such as layers and selection tools — then you will need a photo editing program. Keep in mind that a photo editor doesn't have to be very advanced to provide these features. (Recently, we have been charged with a negative attitude toward the welfare of families. That is one of the reasons we are creating a system of family assistance. We want to develop, through such a program, an attitude which will, among other things, encourage the raising of large families. I do not want anyone to think that our program is a handout or charity program and do not care whether people are married, or not married, no matter how many children they have. It is the principal that welfare must be related to family growth, and in such a way as to promote the growth of large families. We will try to concentrate on the family itself and see to it that the children in a family are raised properly.) 1. Field of the Invention The present invention relates to a packet transmission device and a packet reception device which adapt a transmission format and a reception format in accordance with transmitted packets. 2. Description of the Related Art Communication between various types of communication devices such as, for example, a personal computer (hereinafter referred to as a PC) and a printer which are connected to each other via a serial communication line is often conducted via a packet signal, such as a USB (Universal Serial Bus) signal. In recent years, image data of various different types such as, for example, a facsimile picture, a hard copy, and a portable still camera is transmitted to the PC via the serial communication line and stored in a hard disk. It is desirable for the amount of information (e.g., the amount of image data) stored in the hard disk to be reduced as much as possible in order to have a large capacity of the hard disk. However, since the amount of information stored in the hard disk is significantly increased by a large amount of image data which are transmitted from various digital cameras during the recent use of communication by a packet signal, it is necessary to increase the transmission rate of the packet signal. In the same manner, since the transmission speed of an EOS serial communication line exceeds 10 Mbps, even though a personal computer can transmit data to a hard disk connected thereto via the EOS serial communication line, the capacity of the hard disk is limited.Pan-STARRS Pan-STARRS (Panoramic Survey Telescope and Rapid Response System) is a wide-field 1.8-meter telescope which was built by the University of Hawaii Institute for Astronomy and managed by the Panoramic Survey Telescope and Rapid Response System (Pan-STARRS) project.
