Electronic mail (email) has become the predominant form of communication and data transfer in the modern business world. Email allows the fast, convenient transfer of information. In the past, data was transferred by courier (physical mail) or by telecommunication, for example, through the telephone. The cost of transporting physical mail is relatively low. Typically, such mail costs about \$0.00 to \$0.10 to deliver to a recipient for letters up to one pound in weight. In comparison, the cost of transporting a piece of physical mail by air freight is approximately \$0.50 to \$2.00 for letters up to 20 pounds in weight. In the past, electronic mail systems have not been as cost effective as physical mail, as they are much more expensive to set up, maintain and operate than physical mail systems. ca3bfb1094
