Connections to Google Earth, Google Maps, and Bing Maps Exporting to: Hypercad, BOBD, dxf, ERDAS IMAGINE Various users have been able to hack parts of AutoCAD into the Linux operating system, including 3D modeling and design. AutoCAD programs were made available for certain UNIX and Linux operating systems in the late 1980s, making them the first CAD programs for non-Windows platforms. They were used mainly in Europe. The first AutoCAD product to be ported to Linux was Architecture 1992, and the first major distribution was Red Hat Linux. AutoCAD Architecture for Linux was bundled in the Red Hat Linux distribution until 2006. In the early 2000s, a new set of APIs was introduced to extend AutoCAD functionality. The first two versions of VBA, a Visual Basic for Applications, were introduced in AutoCAD 2000 and 2001. VBA was never available for the Windows platform. Most of the functionality is available in the AutoCAD class library. AutoCAD 2000 and AutoCAD 2001 are the first AutoCAD programs with integrated Visual LISP support. AutoCAD's Lisp script language was first introduced in AutoCAD 1991 and continued until AutoCAD 2010. AutoCAD 1998 is the last version supporting a version of Visual LISP. Visual LISP and AutoLISP are object-oriented programming languages, designed for use in AutoCAD. AutoLISP is a subset of LISP. Visual LISP was introduced in AutoCAD 1999 and continued until AutoCAD 2010. LISP was first introduced in AutoCAD in 1985. AutoLISP is a subset of Visual LISP and can be used in AutoCAD 1999 to AutoCAD 2010. In AutoCAD 2010 the Visual LISP language was changed from its previous description in the AutoCAD help to an abbreviated Visual LISP syntax. This change in syntax was also found in the Visual LISP extensions of AutoCAD 2011 and AutoCAD 2012. This syntax change appeared to be to further simplify the AutoCAD programming language. AutoCAD 2010 introduced a new object-oriented programming language called ObjectARX, an extension of the old C++ class library. Open the ArcGIS Pro Manager Select "Generate". When the scan has finished, select the file, which you would like to use. Now that we have a georeferenced building plan it is now time to associate the plan with the building site. This will help if you're working with 2D drawing. ArcGIS Pro Step 1 Open ArcMap and open the plan. Step 2 In ArcMap's Attribute Table open the 'Georeferencing and alignment' tab and make sure the 'Planned View' is selected in the right-hand bottom corner of the table. Click 'Apply' to ensure that the Plan is aligned to the location of the building. Step 3 Select the plan in the table and go to the 'Edit' menu and select 'Project.' In the new window that opens you should see the name of your plan and should be able to edit the name and the extension of the file. Step 4 Open the folder of the building in your file manager and in the folder, open the 'Legacy Raster Document' or.DGN files that you created earlier. Step 5 Open the DGN file in Autocad and go to the 'Import/Export' menu. Select 'Import' and then choose 'Laser Scan' and select 'Optical Measurement' from the menu that pops up.
