Back4Win For PC

Back4Win Activation Code is a lightweight Windows application designed specifically for helping you back up and compress data to ZIP file format. In addition, you may export the files to EXE file format so you won't need specialized decompression programs in order to extract the files on the target system. Simple looks Back4Win does not excel in the visual department. The layout doesn't look very well organized so you need extra time to get used to working with it. The tool implements a multi-tabbed layout for helping you create archives and check the contents of ZIP archives. Create ZIP archives Back4Win gives you the possibility to use an Explorer-like layout for browsing throughout the content of the folders and files stored in your computer. What's more, you are allowed to password-protect the archives for making sure unauthorized users cannot have access to your files, include hidden items, save directory names, as well as change the compression level (maximum or medium). You are allowed to copy files, update the files, refreshing the existing items, or move data and delete it at the end of the process. The application helps you back up Firefox and Thunderbird data profiles, Thunderbird profile, Thunderbird profile, and mail, as well as Firefox settings. ZIP extraction and other handy features Back4Win offers you the freedom to import ZIP archives and preview their content. It displays information about each item, such as filename, path, size, type, date, and time. Furthermore, you may switch between a tree or list view mode, expand directories, overwrite files, and extract all files or only the selected ones, convert the current archive to EXE file format, delete files from the archive, as well as test the validity of ZIP archives. Bottom line All in all, Back4Win integrates a basic suite of features for helping you generate and explore ZIP archives but it still needs some improvements to make the GUI look cleaner and easier to work with. On the downside, it hasn't been updated for a while, so it may cause compatibility issues on newer operating systems. What's New in the Back4Win?

In the era of online backup, there are many different solutions for storing the files and data that you deem worth keeping. One of them is ZIP archive format. ZIP file format can be used to store any kind of data, such as contacts, emails, documents, videos, songs, pictures, and a lot more. You can use any software to create ZIP archives, but Back4Win makes the task a bit easier. Back4Win is a lightweight application designed specifically for helping you compress and back up your files. What's more, you may import multiple files and folders to ZIP archives, preview their content, extract them, as well as compile them to EXE file format. If your files and folders are bigger, you may set the maximum allowed size for ZIP archives. Back4Win supports a wide range of compression levels, thus it allows you to choose the best solution for your particular data. In addition, the application also helps you to create password-protected ZIP archives to protect your data from unauthorized access. Back4Win offers you the option to save the destination folder, update the existing items, refresh the contents of the archives, extract all items or a specific group of files, or delete items from the archive. The tool also allows you to check the ZIP archives for errors and their validity. Create Storify from your Mac Create Storify from your Mac Create Storify from Mac is a new Mac app that allows you to create Storify from your Mac. It's a

simple service for you to share Storify of pictures, articles, tweets, links or any other thing in an interesting way. It is like a buzz word scanner, it can scan keywords from various sources such as links, videos, articles, tweets and updates in real time. You can then create your own Storify based on the search results. You'd be surprised that there is no other Mac app to do that! How does CreateStorify work? In short, CreateStorify is an app built on top of the Storify service. It collects the content from the web and sends it to the service. Then the service creates a Storify with the content and gives you back the URL of the resulting Storify page. You can share this URL by any means - to other people, via email, text, social networks like Twitter, and so on. CreateStorify Features Easy to use CreateStorify is
