Choose your Outfit Dark Nebula VR Free Download combines elements from games like Gravity Falls and Minecraft VR with supernatural horror and supernatural adventure to create an immersive VR experience. In Dark Nebula you play as Wendy who lives in a boarding house with other boarders including new girl Carlie. This mysterious boarder warns of evil forces in the basement below the boarding house and in the nearby woods. Can you help Wendy to unearth these mysterious beings? After installing the game you can choose to jump right in with the default intro sequence where you can also catch your first glimpse of Carlie. Once you've chosen between Wendy and Carlie, the game begins with two distinct game worlds. You are free to jump between worlds as you please. The basement: This is where you start in the

basement of the boarding house. The game can be played in either a third-person view or a first-person view. Wendy is exploring the basement and you can choose to explore as well. There is a number of items you can choose to use on the items displayed in the basement. You can find keys, and by finding two you can unlock doorways for each room. By finding all four items, you will be able to unlock the Dark Nebula Room. If you are playing in a third-person view, you will also see in which direction Wendy is moving to.

The woods: Wendy is exploring the nearby woods. You can explore here as well but you cannot use objects in the woods. You will stumble across objects and Wendy will give you advice to what you should do. You should only jump on items if you are truly sure it is safe to do so. Wendy will be able to see the items you are standing on. Wendy warns you that you must keep in mind that this is a place where evil dwells. If the area you are moving in is filled with stone monsters and traps you will not be able to get out. If you are moving through water, you will drown. The sky is open and no protection is in sight. There is a mystery you must uncover.

Awards for Dark Nebula VR: This new horror game can be seen as a mixture of two very distinct genres: horror and adventure. There are already some pretty good 3D horror games out there but that genre is rarely well represented in VR.

This is one of the biggest problems with VR.

M Converter Software detects and converts your PC for high quality immersive VR with Logitech thanks to a QuikVR Gaming Headset. Brand: Logitech Logitech AUDIOTRONIK Review: The Logitech AUDIOTRONIK is an impressive headset that offers the technology and the comfort, which you need for perfect gaming sessions. Once we have used it for some hours, we have truly appreciated a very comfortable wireless headset. This is not a cheap headset, but in our opinion it is worth it because you will get the other benefits and extra comfort from a gaming headset. We loved the amount of connectivity and possibilities that this device offers and we think you will too once you see it for yourself. It is really a unique device because it works well in different headsets without making any changes. The design is pretty well balanced and every kind of headset you have already will be compatible with your device. In addition to the wireless connection options, you can connect your device to a PC. To start with, you will be able to enjoy some hours of gameplay without using it again. This compact device allows you to adjust all the different parameters with which you can find it and enjoy virtually any type of game. You will have an easy time enjoying your games because you can move it on your head and adjust it without having to use any tools. To play you will need a microsd card of 16 GB or more because the device uses those spaces to store games and additional data. In addition, it comes with two ear buds

that fit comfortably in your ears. We truly can say the sound it is good if you watch your audio applications, movies or even videos. If you have to listen a lot to music, you might encounter some problems because the ear buds are really tight which impacts the quality. We suggest you to select the option that allows you to feel comfortable while listening. One thing that makes this headset unique is that you can adjust all the vibration functions. You can turn it on and off, or modify the settings for each one, which is really nice when you have a lot of different applications running at the same time. There is a volume control, because you can be sure that you have enough volume to make your move unnoticed. Apart from that you will be able to hear audio notifications when important events happen. Overall, the AUDIOTRONIK offers really good sound and a large amount of movement. Our Experience with Logitech AUDIOTRONIK: When we received the product
