I purchased this game for $25.00 and shortly after it arrived at my home, I sat down with my main curiosity being; how would this game run on a low power windows 7 system with an Intel Pentium IV 1.6 GHz and 1 GB DDR2 RAM. When I first booted up the game, the title screen takes about a minute to load before any other scenes of the game itself display. After the title screen was loaded, the camera view was too narrow for me to be able to swing my arm around like you see in the screenshots and at the end of the game, I was able to use my keyboard, mouse, and the built in "rec" button, in addition to other remote control software, to turn on the gamepad at the start of the game. (This has not been tested at this time as I have not yet worked with the gamepad.) I was able to get into the game, but the first screen that shows up is with men dropping down from the sky and these guys load up after as much as a minute and after each load up sequence, I was quickly able to get rid of the "AI" (artificial intelligence) and go into a game mode where I could control the on screen character and have the main character (the warrior) run around and fight enemies. You will notice in the images that are on this review that I am not that far in the game as there is still another tutorial sequence to go through before I get into the main game itself, but I will say that you will definitely get into the game rather quickly and the tutorial is going to take most players half a game before they ever get into the main game and without the main game's "tutorial", it really is not worth $25.00 This is obviously only the first scene of the game, but from what I can tell the graphics are not bad at all and in fact are very good. The main character can automatically assign a skill or a weapon to his hand and will do this as you make your way through the tutorial. You can also pick up any weapon or magic or any of a few "collectibles" that will appear in every area of the game. The tutorial will give you information on the skills and weapons. The skills are not taught to you as a skill in the game, but with a dot on your skills bar in order of level. bff6bb2d33
