What's New in the?

PDF is considered to be a universal file format for document exchange. There are around 1.3 billion PDF files being exchanged on the Internet right now. Users prefer PDF files instead of many other document types because of its characteristics such as: 1. It is not very prone to be edited in complicated ways or manipulated with all sorts of tools; 2. It is known to be immune to common virus attacks and therefore does not incur much of risk when being shared. Thus, people who want to share document are very likely to choose PDF files as the target of their exchange. 3. It is rather complex and advanced PDF files are made by digital signatures. The signature information is based on the Encryption Standard PKCS#7, AES, and CMS. 4. It consumes little memory and disk space. PDF is a method to share different types of documents, mainly in text form. PDF files contain a lot of data with common fields such as source and destination of the file, the document title and author, the date of publication, date of last update and modification, and document encryption. However, there are a lot of situations in which PDF files are not suitable. For example, there are so many situations that the PDF files do not meet the needs of users, such as: 5. It is not suitable for sharing files with large sizes. If a user wants to share a huge file to a colleague via email, PDF is not a suitable choice. 6. It is very large for sharing large files. When sending a file to a friend via email, PDF is just not a very good choice. 7. PDF files have poor readability and low response rate. PDF files contain a lot of data with information about the document, which can make it a long document to read. This would affect the response rate, the readability and the response time when reading PDF files. 8. PDF files are easy to be modified. Users can easily modify PDF files by adding text, graphics, images, hyperlinks and many other useful things to make the document appear more attractive. 9. PDF files have lots of complex structure. PDF files contain a lot of information about the document, such as document title, author, keyword list, encryption and a lot of graphical elements. Users can easily modify the information about the document, which results in mixed information in the PDF file. In this scenario
