I need to make it without using VBA. Thank you very much for the help! A: Assuming your example data shown below the same output for you could be achieved with a simple formula like this: =IF(ROW(A1)Alfonso Marangoni Alfonso Marangoni (also known as Alfonso de la Serna y Marangoni) was a 17th-century Spanish explorer, most known for his overland expedition from Acapulco to the Chichimeca territory of Michoacan, later discovered by Pedro Mina y Madrid, then Governor-General of the New Spanish Company in Mexico. Early life Marangoni was born in Spain in 1594 as

anesthesiologiademorganpdfgratis The objectives of this research are (a) to establish the nature and extent of the response of pectoral muscle to fatigue and (b) to determine whether the response includes changes in the interaction of neural and hormonal systems controlling the response.

Fatigue will be studied in two ways; one involves the direct application of a fatiguing stimulus, and the second involves the effect of the accumulation of fatigue on a subsequent imposed stimulus, and attempts will be made to establish the relative contribution of nerve and muscle to the accumulation of fatigue.

The second objective involves the determination of whether either increased or decreased levels of cortisol will affect the nature of the fatigue response in the pectoralis muscle.

Q: trouble understanding the statement "n is finite and the map g is continuous" Let $f: X \rightarrow Y$ be a continuous map between two topological spaces with X and Y locally compact. Suppose that Y is endowed with the unique

locally compact topology for which f is continuous. Then the following statement holds: n is finite and the map $g: X^n \rightarrow Y$ defined as $g(x_1, \dots, x_n) = f(x_1)$ is continuous. This is from "classical foundations of modern mathematics: a universal approach", by G A Kock: A: We already know (directly from the assumption) that Y is locally compact. So, let $\{U\} \subseteq Y$ be an open cover of Y and write $U_i = f^{-1}[V_i]$. Each U_i is open in X and X is locally compact, so we can choose a compact K_i
