
Atomix Virtual DJ Pro 8.0.2206 Multilingual Content - AppzDam Full [HOT] Version

. Atomix Virtual DJ Pro 8.0.2206 Multilingual + Content - AppzDam full version Value of 18F-FDG PET/CT for Initial Staging of Prostate Cancer: A Meta-analysis and Systematic Review.

To evaluate the accuracy of prostate cancer (PC) staging by means of [18F]fluorodeoxyglucose positron emission tomography/computed tomography (18F-FDG PET/CT). A systematic review of the literature was performed according to the Preferred Reporting Items for Systematic Reviews and Meta-Analyses guidelines to identify studies reporting the accuracy of 18F-FDG PET/CT for initial staging of PC. Overall, 32 studies were retrieved, including 21 with histological confirmation and 13 without. The majority of them (25) were prospective. The diagnostic performance of [18F]FDG PET/CT and conventional imaging techniques was evaluated for the detection of locally advanced disease (LAD) and metastatic disease (MD). Sensitivity, specificity, positive predictive value (PPV), and negative predictive value (NPV) were pooled together. The meta-analytic approach, including a random-effect model and the I2 index, was used to account for potential heterogeneity. In 20 studies, 34% had LAD, and 42% had MD. [18F]FDG PET/CT had the highest pooled sensitivity and specificity for LAD (0.91 [0.81-0.97] and 0.90 [0.83-0.95], respectively) and MD (0.98 [0.93-0.99] and 0.93 [0.79-0.97], respectively).

[18F]FDG PET/CT was significantly more accurate than computed tomography (CT) (P=0.017), magnetic resonance imaging (P=0.008), and prostate-specific antigen (PSA) alone (PBebeto Santiago Bebeto Santiago Vargas (April 16, 1939 - August 8, 2015) was a Chilean
