Until recently, our knowledge of the regulatory regions of the human TTF-1 and PAX-8 genes has been quite limited. We have recently published data on the molecular characterization of two novel TTF-1 binding sites. In addition, we have identified a number of potential PAX-8 binding sites in the flanking region of the TTF-1 and PAX-8 genes and demonstrated that these sites are functional and cooperate with the TTF-1 binding sites. We have shown that thyroid-specific expression of the TTF-1 gene is stimulated by thyroid-specific expression of the PAX-8 gene. This finding suggests that the differentiation of the fetal thyroid requires the participation
