psqlODBC is a PostgreSQL ODBC driver that can be used with the integrated connection administrator that is database- and OS-independent in order to access the PostgreSQL DBMS (which is the PostgreSQL database management system). This software solution can help advanced computer users set up connections that can be used by every single application in their system via the native ODBC Data Source Administrator. Once the connection has been successfully configured, it will help them work with pieces of data stored within the PostgreSQL server both quickly and directly. Deploying the driver on the target system can be done by choosing the architecture type from the download section and retrieving the appropriate document, depending on the workplace environment, unpacking the archive and running the installer that's bundled within it. The connection strings can be observed and studied in the following section: Standard: Driver={PostgreSQL};Server=IP address;Port=5432;Database=myDataBase;Uid=myUsername;Pwd=myPassword; ANSI: Driver={PostgreSQL ANSI};Server=IP address;Port=5432;Database=myDataBase;Uid=myUsername;Pwd=myPassword; Unicode: Driver={PostgreSQL UNICODE};Server=IP address;Port=5432;Database=myDataBase; Uid=myUsername;Pwd=myPassword; SSL: Driver={PostgreSQL ANSI};Server=IP address;Port=5432;Database=myDataBase; Uid=myUsername;Pwd=myPassword;sslmode=require; To get the latest drivers visit the [postgresql site][8]. This software package is the PostgreSQL ODBC driver which acts as the client-side library for accessing databases that use the PostgreSQL database server. It offers a language-independent driver that provides support for ODBC compliant drivers. The solution can be used with any ODBC compliant drivers that supports ODBC 3.8 compliant drivers. psqLODBC Features: A language-independent and platform-independent PostgreSQL client library with ODBC 3.8 compliance that can be used to interact with the PostgreSQL DBMS. Easily integrated into the OS independent Data Source Administrator (DSA) that is database- and OS-independent. Integrated support for the ODBC Data Source Administrator that is database- and OS-independent, allowing access to virtually any data source supported by the PostgreSQL server. Integrated support for the native PostgreSQL ODBC driver that offers access to almost any PostgreSQL data source. Remote and local access with the native PostgreSQL ODBC driver. ODBC Data Source Administrator: With this configuration utility, you can easily browse the drivers that are installed within the OS, access and configure your ODBC data sources. Once configured, users with the appropriate permissions can connect to the ODBC Data Source Administrator that runs locally. If they want to use remote connections, they can access the DSA through standard means. System Requirements: · Operating System: All components in this solution are designed to run on Windows 2000/XP/Vista. · Requirements for PostgreSQL: Minimum OS supported is NT 4.0 (Service Pack 3). · ODBC: It is considered optimal if you use the default ODBC 2.0 driver. Users can use any ODBC compliant drivers for access to any database. · Firefox or Internet Explorer: Each solution can be installed on any version of Firefox or Internet Explorer. · 3-rd party drivers: Users can use any ODBC compliant drivers for access to any database. · PowerShell: The PowerShell 1.0 - 2.0 developer tools and the .Net 2.0 runtime must also be installed on the system. · ODBC Data Source Administrator: The ODBC Data Source Administrator is a configuration utility for the .Net ODBC 2.0 providers that allows easy access to the installed ODBC drivers. If users need to connect to multiple databases or perform batch work, they can connect to a remote database through standard means such as the ODBC Data Source

PostgreSQL ODBC driver that allows interaction with PostgreSQL from non-PostgreSQL clients. Use this driver to access the PostgreSQL database directly, either by using the standard connections, ODBC, or through the ODBC APIs provided by PostgreSQL. psqLODBC is a free and open source solution that can be used to connect applications to the PostgreSQL DBMS. It is also configured to handle ODBC data sources, and thus, it can be used to connect to Microsoft SQL Server, MySQL, Oracle and other ODBC-compatible data sources. You can achieve this by following the steps below:- 1. Download the PostgreSQL ODBC Driver in any of the required formats listed above. 2. Unzip the archive using unzip command. If the archive is only a single file, then you can execute the tar command on it. 3. Execute the psqLODBC.exe installer. The PostgreSQL ODBC Driver can be used in the following workflows: Connect using PostgreSQL ODBC drivers built into the Database Client. Standard: Driver={PostgreSQL};Server=IP address;Port=5432;Database=myDataBase;Uid=myUsername;Pwd=myPassword; ANSI: Driver={PostgreSQL ANSI};Server=IP address;Port=5432;Database=myDataBase; Uid=myUsername;Pwd=myPassword; Unicode: Driver={PostgreSQL UNICODE};Server=IP address;Port=5432;Database=myDataBase; Uid=myUsername;Pwd=myPassword; SSL: Driver={PostgreSQL ANSI};Server=IP address;Port=5432;Database=myDataBase; Uid=myUsername;Pwd=myPassword;sslmode=require; psqLODBC Environments: Note: In order to resolve the ODBC driver, the database servers should be configured with hostname or IP address and port Specify the driver type (ANSI, Unicode, SSL, etc.): Specify the driver type as used in the ODBC Connection Formatter. Specify the database (if one isn't already specified): Choose the database from which you want to connect. Specify the connection string: Enter the connection string as you would normally do. For example: Server=IP address;Port=5432;Database=myDataBase;
