Sony VAIO E Series Laptop Specs Review (Windows 8.1 64-bit Win10 64-bit Win7 32-bit.Q: Represent changing Text of Textbox on Windows Form I have a problem where I have a Windows Form with a textbox. When the textbox is clicked the text is changed to this String format: String text text text What's interesting is that if the form is in focus and the text box is clicked as quickly as possible, the "text" is seen but actually disappears too quickly to be certain. I have searched and have found questions regarding attaching events to the textbox and listening for changes in the text, but I'd like to know how to handle these situations where the string representation of the text in the textbox gets instantaneously changed. Using C# and .NET Framework 4.5 A: You can get the change in the textbox but it is not necessarily the correct time as you see it private void textBox\_TextChanged(object sender, EventArgs e) { if (textBox.Text == "text") textBox.Text = "text"; } This works,
