Network All Content, apps, and software that are downloaded or installed from Microsoft's official site, the Windows Store, or Windows Store Apps are indexed by Windows Update. AppX packages are stored in a folder called AppX\ on a

computer's hard drive. Most game installers include the game executable file (.exe), the game's data files, and the additional content required to run the game. The install package includes the game exe, the game's data files, and any extra content required to run the game.

Unlike the exe file, the content files are not required to install and run the game, but they do need to be installed in order to play the game. It is uncommon for a game to require more than one exe file to be installed at a time. It is common for the game installers to require all files in a single folder to play a game. For example, the game The Sims 3 requires a single folder containing the game's files. A program called the game editor (an optional program) is included with some game installers. A game editor can be used to manipulate files on the computer, and change settings for the game. For example, an editor can change the game's play screen resolution. The following game installers include both a game executable and a game

editor: The Sims 3, Assassin's Creed III, FIFA 13, Madden NFL 13, NBA 2K13, Need for Speed Most Wanted, NBA 2K13, South Park: The Stick of Truth, Star Wars: The Old Republic. Windows Store apps and Windows Store Apps on Windows 10 are downloaded from the Windows Store and installed with a double-click. When a user first installs a game from the Windows Store, the
