
GameSalad Creator Pro 1.24.5868.32842

The collaboration with GameSalad will kick off with a Tencent-developed GameSalad App SDK (software development kit). GameSalad will provide the App SDK to all its 1.5 million registered users and offer deep educational discounts to schools, students and teachers to purchase licenses and tens of thousands of game development education curriculum resources. The resulting tens of millions of students and teachers using GameSalad will be trained in how to build, publish and monetize games. The collaboration will also help develop support programs for all three platforms, including online help, in-app customer service and in-app advertising solutions. In a professional gaming environment, these combined contributions will translate to a huge benefit for both GameSalad users and developers. There are three types of UI (user interface) tabs that appear when you launch GameSalad Creator: Scene, Level and Transitions. These are further broken down into numerous layers. Each of these layers can contain components such as objects, UI buttons, images, videos, and music. All of these components can be dragged from one layer to another. We will try to link basic to advanced examples, but the main takeaway is that all of the basic stuff can be done without any coding, and you will be able to create a simple game in just minutes! GameSalad Builder Studio is a creative suite of tools that let you create your own game designs. GameSalad breaks down the creative process into several steps: Engagement, Exploration, Game Design, Game Art, Level Design, UI Design, Scene Design, Transitions Design, Music Design and Sound Design.
